PROFESSIONAL SUMMARY

Software Engineer with 2+ years of hands-on experience developing scalable web applications using the MERN stack. Strong foundation in software architecture, database systems, and REST API development. Passionate about building maintainable systems and collaborating within cross-functional teams.

TECHNICAL SKILLS

Languages: JavaScript (ES6+)

Frontend: React.js, Next.js (App Router), Tailwind CSS, Redux, Context API, Vite, Recharts, React Router, TanStack Query, React Hook Form

Backend: Node.js, Express.js, REST APIs, JWT Authentication

Database: MongoDB (Schema Design, Aggregation Pipelines, Indexing), Mongoose, Supabase (PostgreSQL, Auth, Row-Level Security)

DevOps & Tools: Git, GitHub, Postman, Vercel, Stripe, Nodemailer

KEY PROJECTS

SpendSignature – AI-Powered Personal Finance Tracker (Final Year Project) — Live

Role: Full Stack Developer

- Built and deployed a production-ready full-stack application (React + Vite frontend, Python Flask API, Supabase backend) that tracks spending, detects unusual transactions, and forecasts finances 3 months ahead.
- Implemented AI-driven features: rule-based, z-score, and Isolation Forest anomaly detection, plus linear-regression forecasting, with a Google Gemini–powered advisor that explains results in plain language.
- Designed secure authentication with Supabase email/password and Row-Level Security (RLS) to protect user data.
- Created interactive dashboards with Recharts — income vs. expense trends, category breakdowns, and budget health — along with multi-currency support, dark mode, subscription tracking, and one-click PDF export.
- 🔗 Live: spendsignature.vercel.app

Nature Tour Booking – Full-Stack Web Application

Role: Full Stack Developer

- Developed a complete tour-booking platform with a Next.js (App Router) + Tailwind CSS frontend, interactive Leaflet maps, and a custom Node.js/Express API backed by MongoDB with Mongoose.
- Implemented full JWT-based authentication — signup/login, protected routes, and bcrypt password hashing — plus security hardening with Helmet, rate limiting, and NoSQL-injection/XSS sanitization.
- Built REST APIs for tours, users, reviews, and bookings, with Stripe payment integration, image upload & resizing (Multer + Sharp), and transactional email notifications (Nodemailer).
- Used advanced MongoDB features — geospatial queries, aggregation pipelines, and indexing — to power search, filtering, and fast responses.

Personal Portfolio – Next.js — Live

Role: Frontend Developer

- Designed and developed a responsive portfolio website with Next.js (App Router) and Tailwind CSS to present projects, skills, and contact information.
- Implemented [dark mode / SEO / contact form — confirm what applies] and deployed it live at <https://muhammadfarhan-portfolio.vercel.app/>
- Source: <https://github.com/Farhan0614>

Additional Projects

- The Wild Oasis — React booking-management dashboard | Live: <https://the-world-oasis-dgx9.vercel.app>
- Forkify — recipe search app with external API integration | Source: <https://github.com/Farhan0614/forkify-Application>
- Full list: <https://github.com/Farhan0614/>

EDUCATION

Bachelor of Science in Software Engineering

GC University Faisalabad, Sahiwal Campus | 2022 – 2026 | 3.84/4 CGPA

Focus Areas: Software Architecture, Database Systems, Web Engineering
